

## Creating local resource type for records for Braille and Large Print works

The resource types of *Braille* and *Large Print* are based on the character in position 23 of the 008 field in the MARC record. A record that has 'd' in position 23 is for a work with Large Print and a record that has 'f' in position 23 is for a work in Braille.

**008 field from record for Large Print work:**

008 200226t20192018nyuabf dd000 1 eng d

Position 23 →

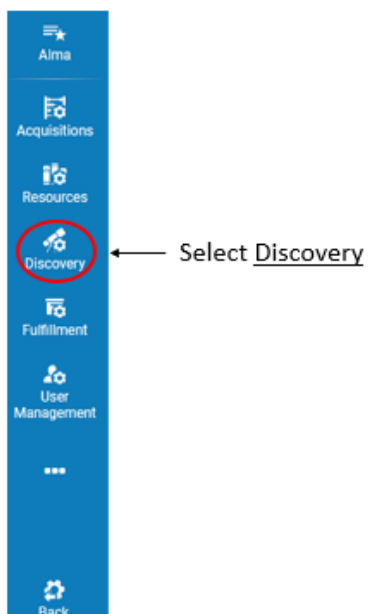

**008 field from record for Braille work:**

008 940818s1994 dcu f000 0 eng d

Position 23 →

**To create the Braille and Large Print resource types, the following steps were followed:**

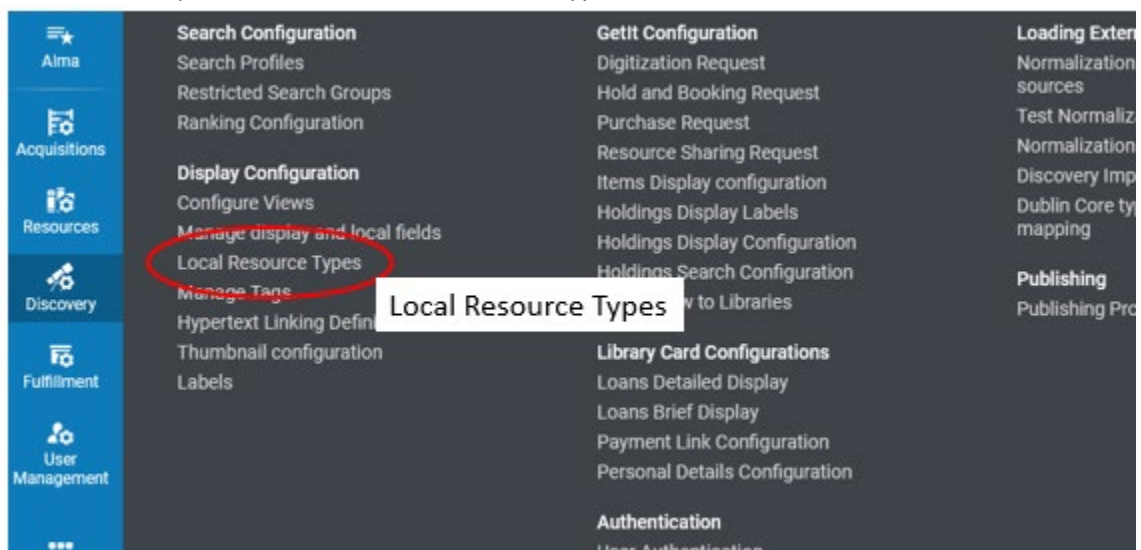

1. Go to the discovery module in Alma:

Configuration dashboard  
Click on any link from the configuration menu on the left

## Creating local resource type for records for Braille and Large Print works

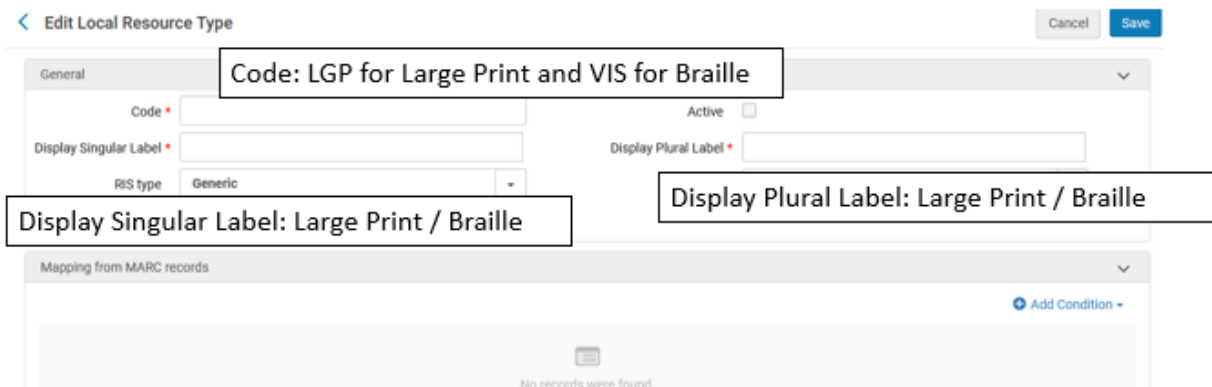

2. In the discovery module select Local Resource Types:

3. On the Local Resource Type page click on Add local Resource Type (note in the illustration below local resource types for Large Print and Braille have already been added):

4. First fill in the code, singular, and plural labels in the general section of the resource type form:

## Creating local resource type for records for Braille and Large Print works

- Next click on Add Condition:

1 - 1 of 1

Add Condition

- In the add condition box enter **008** for MARC field and subfield and for Value in MARC field enter **^.{23}[d].\*** for Large Print or **^.{23}[f].\*** for Braille. Then click on the Add Condition button:

MARC field and subfield: 008

Value in MARC field: ^.{23}[d].\* for Large Print or ^.{23}[f].\* for Braille

Use Regular Expression ☒

Add Condition

Add Condition

- Make sure the resource type is Active and click on Save:

Active ☒

Save

- Before records will display the new resource type in the front end of Primo they will need to be reindexed. A list of MMS ID numbers can be sent to Ex Libris for reindexing or each individual record can be opened and then saved and released in the metadata editor (obviously this would

## Creating local resource type for records for Braille and Large Print works

only be done for a relatively small number of records).

9. When indexing is completed the local resource type will appear in the display as follows:

10. The new resource type will also be a facet value under the Format facet:
